

# Changing Facilities Kinghurst Academy Birmingham

## Project requirement

Following the construction of Kinghurst Academy's 2 new 3G sports pitches, they required new changing facilities to match. CPS were commissioned to undertake a design and build mechanical package. The new building requirements needed to cater for 4 new team changing rooms, 2 official changing rooms, a small function room with kitchen service area plus additional visitors and members wc toilet areas.

## CPS Involvement

Our responsibility was to provide a full design and build mechanical installation based on the employer's requirements and performance specification issued by the client's mechanical consultant. The building was heated by a gas fired boiler providing heat through press steel radiators with local controls. Extract ventilation and heat recovery units were used in the changing room and w/c areas. Hot and cold water services supplied to all changing facilities and w/c areas.

## Timescale

The mechanical works on this project were completed within 7 weeks and in line with the building program.

## Project resolution

The scheme was commissioned and handed over to the client in August 2015.
