

# Club House Re-Fit Tilgate Golf Course Crawley

## Project requirement

Tilgate Golf Club's completely re-fitted club house was the most popular talking point for all the club's members in 2013. The new building included new facilities such as a function room, a bar and pro shop. The commercial kitchen could handle the catering for the function room and bar meals and proved to be just one of the benefits the members could look forward to.

## CPS Involvement

Our requirement was to provide a full design and build mechanical installation based on the employer's requirements and performance specification issued by the client's mechanical consultant. The building was heated using low pressure hot water under heating using press steel radiators with local controls. The ventilation was installed using heat recovery units to the changing and seated communal areas. Hot and cold water services supplied to all w/c, kitchen and changing shower areas.

## Timescale

The mechanical works on this project was completed within 12 weeks and in line with the building program.

## Project resolution

The scheme was commissioned and handed over to the client in March 2013 the members immediately enjoying the benefits of the new facilities.
